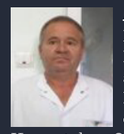
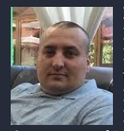
This book comprises scientific information regarding the identification of the p53 isoform protein in malignant hematologic diseases, which impacts the clinical management of ill patients.

In recent years, more attention has been paid to the importance of the p53 protein in terms of chronic lymphocytes leukemia, (CLL) in progression to Richter Syndrome, which is characterised by low survival of patients and non-response to classical conventional chemotherapy, due to mutations in the p53 gene.

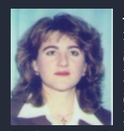
The book deals with theoretical concerns, but also with practical considerations, highlighting the great need for updated research in the biological sciences in general, and in medicine in particular.



Aurelian Udristioiu, MD, is a PhD Fellow at Titu Maiorescu University of Bucharest, Faculty of Medicine, Romania. His research covers haematology, immunology and pathology-oncology. At present, he is an International Associate Member of the American Society of Haematology and Member of the Society of Haematology Oncology, (SOHO), University Texas of Houston, USA.



Ioan Ovidiu Gheorghe, MD, PhD, works in the Directorate of Public Health, Gorj, Romania. He has a Level I certificate of graduation from the Department for the Training of Teaching Staff in the Constantin Brancusi University, Faculty of Medical Science and Behaviours, Romania. He is a member of the Society of Occupational Medicine, UK.



Associate Professor Delia Nica-Badea, PhD, is a member of the Faculty of Medical and Behavioural Sciences at Constantin Brâncuşi University, Târgu Jiu, Romania. She is a member of the Romanian Chemical Society, the Romanian Society of Biochemistry and Molecular Biology, and the Romanian Society of Cell Biology in Romania. She is a recipient of the Order of Biologists, Biochemists and Chemists from the Romanian Health System.
